Drumroll, please. We have surpassed our goal of more than 2,000 home interviews, and it’s a wrap for P2P, folks! Thank you again for helping us connect genetic risk factors and social environments to disease outcomes.

You shared your health history, concerns, and attitudes. You helped us determine how common major health issues are in Indiana. You increased awareness of important public health needs for public officials and healthcare professionals.

This may be P2P’s final act, but spin-offs like the COVID-19 Follow-up Study are ongoing. Check out some of our latest findings from COVID-19 and P2P.

Statistics are subject to change until data analysis ends. All data are self-reported.

**IMPACT OF COVID-19 NOT ALL BAD**

(subset of P2P households = 935 participants)

**HOOSIERS SUFFER: PANDEMIC’S ECONOMIC DOWNSIDE**

Compared to before, Hoosiers worried more about . . .

P2P REPORTED ILLNESSES

Respondent—or someone in the respondent’s immediate family—has the illness now or had the illness in the past:

- 70% Arthritis
- 61% Obese/Overweight
- 60% Cancer
- 55% Diabetes
- 46% Asthma
- 44% Heart Attack
- 36% Stroke
- 35% Heart Disease

P2P ATTITUDES & EXPERIENCES

- 58% want a clean needle distribution program for those who use drugs
- 55% get at least 15 minutes of minimal-effort exercise five times per week
- 19% think that getting treatment for mental health would make someone an outsider in their community
- 16% think they have been unfairly stopped, searched, questioned, physically threatened, or abused by the police

P2P FINANCIAL HEALTH

- 15% Missed a Health-Care Appointment
  *Due to cost, participants say someone in their family has missed an important medical or dental appointment in the past year*
- 81% Good, Very Good, or Excellent
- 76% Overall Health
- 71% Physical Health
- 15% Cut Back on Food
  *Due to cost, participants say they have cut the size of—or skipped—meals in the past six months*
